GRIDLOCKED CITIES · REMOTE ESTATES · ADVENTURE TRAVEL · PRIVATE ISLANDS · SUPER YACHTS

In cardiac arrest, stroke or critical trauma, survival is determined in the first minutes, long before public infrastructure arrives.

We eliminate that gap.

Private medical infrastructure at the **sole disposal of our clients**, wherever they travel.

SHADOW-ICU.COM

The gap is time.
It is everywhere you go.

In a city it is traffic. On an island it is water. At sea it is range. In the mountains it is weather.
The clock behaves the same way everywhere.

GRIDLOCKED CITIES

- Dense traffic costs valuable minutes.
- Response is measured in congestion, not distance.
- We are already at your location when it happens.

PRIVATE ISLANDS

- Nearest ICU often hours away by boat or seaplane.
- Local clinics are rarely equipped for intensive care.
- We deliver intensive care on site.

ADVENTURE TRAVEL

- Safaris, mountain treks, remote expeditions.
- Standard evacuation can take many hours.
- The ICU comes to your location.

SUPER YACHTS

- Beyond helicopter range, evacuation takes hours.
- Whatever is aboard is all there is until port.

REMOTE ESTATES

- Snow can close the only access road.
- Weather can ground aircraft for days.
- Hardest to reach in the season you actually go.

WHAT THE NUMBERS SHOW

RESPONSE · SURVIVAL · THE COST OF WAITING

30 min

LONDON

The average wait for a category 2 call. Stroke and heart attack sit in that category.

8 %

EUROPE

The survival rate when the heart stops outside a hospital.

50 %

WHEN HELP IS THERE

More than half survive if the shock comes in the first minutes. Later, it falls below eleven.

1.8 days

PER MINUTE

Every minute a stroke is treated earlier gives back almost two days of healthy life.

Shadow ICU closes that gap.

Ready *before* help is needed.

Shadow ICU is not an assistance hotline, an insurance product or an air ambulance on call. It is physical clinical capability, placed where you will be, before you arrive.

01 **ROUTE**

Travel dates and destinations are shared with us in advance, so we can assess the medical risk along the way and advise on the level of support required.

02 **MEDICAL INTELLIGENCE BRIEFINGS**

We map the medical infrastructure at each destination and make hospital liaisons in advance. The briefing is shared with you and your security team.

03 **PREPARATION**

Clinicians and equipment are in position before you land. The team receives you at the airport.

04 **CONSTANT READINESS**

On duty around the clock for the full stay, dedicated to a single person. We run twelve hour shifts, where emergency rooms often run twenty four. Invisible unless called.

05 **DISPATCH**

One number, no triage queue. On scene in minutes. Stabilization under intensive care, not first aid.

06 **STABILIZATION AND TRANSFER**

Stabilization at the closest suitable hospital, then transfer to the private clinic best suited to the case.

100+ locations

ONE NETWORK
READY IN ADVANCE

Public services are reactive.

Shadow ICU is proactive.

Arrange a *private consultation.*

Every engagement begins with a confidential conversation about where you travel, who travels with you, and what capability needs to be in place before you arrive.
